

# Technē

## Welcome: To Technē & The Faculty Technology Resource Center

I t's only my fifth year here at Reed, but already I've watched a sea-change in technology's role at the college. This publication aims to both document that role and assist in keeping Reed's pedagogy our particular point of pride. Twice a year, we'll look what people are doing. Up the document pretty clearly. (David suggested that we try again at 800 DPI -I am leaving now, but will come back and try that after I hear yay or nay from you.)

I'm moving to the FML (faster) scanner at David's suggestion, but that may only make a difference of 5 minutes or so. I'm working on the Diebold scanning right now. Due to the high DPI, it's taking

I'm working on the Diebold scanning right now. Due to the high DPI, it's taking almost 20 minutes per image, not to mention the several minutes it takes Photoshop to open and then rotate the image. In addition, the descreening filter doesn't work at this high DPI, so you can see the little dots that make up the document pretty clearly. (David suggested that we try again at 800 DPI -I am leaving now, but will come back and try that after I hear yay or nay from you.)

I'm moving to the FML (faster) scanner at David's suggestion, but that may only make a difference of 5 minutes or so. I'm working. ☺

## The Innovation Game

*Jeff Parker models the economics of high-tech*

I'm working on the Diebold scanning right now. Due to the high DPI, it's taking almost 20 minutes per image, not to mention the several minutes it takes Photoshop to open and then rotate the image. In addition, the descreening filter doesn't work at this high.
